

# 5th Grade Math--2009-2010

Textbook: Harcourt Math

## Class Work----50%

- Daily Assignments

You will complete your assignments and notes in a spiral notebook. On the date that the assignments are due we will grade them together in class. You will grade your own work. I will require you to redo the problems that you get wrong for half the point value. This system is beneficial for you as a student for several reasons: 1) You receive instant feedback on your progress 2) You have the opportunity to correct your mistakes--always a good thing in life! 3) You can keep close tabs on your progress since all your assignments remain in the spiral notebook. This system is also based on the honor system since you are grading your own work. This is a life skill that I know you will take seriously.

- Activities/Discussion/Projects:

You will work together with classmates, and independently, on many activities and projects as you investigate, experiment, and study mathematics and how it relates to your world. Participation, timely completion of your assignments, and taking part in discussions are all very important components of being a successful learner in Math class!

## Quizzes---10%

- Weekly Quizzes

There will be several quizzes given per week. The amount will vary depending on the unit of study.

## Tests-----40%

You will be tested throughout our units of study. Most tests will be written, but I may use other forms of assessment as well.

## Grade Scale:

100%-90%	A
89%-80%	B
79%-70%	C
69%-60%	D
59%-50%	F
